10mm Wetroom Screen

* Side Panel shown for illustration purposes only.
Before you Start

Please read this installation guide fully. Although these instructions are comprehensive we always recommend that a technically competent installer undertake the installation, as incorrect fitting will invalidate the guarantee.

Unpack with care and check that the screen is the correct colour, size, shape and type you require. Ensure that you have all the parts listed as supplied. Check for any damage, **do not install if you are not satisfied** and contact your local supplier.

Check there are no electrical cables or pipe work behind the wall where you wish to install the screen.

Ensure you have a clean dry area to work within before installing.

Important

The fixings provided for this screen are for use on solid walls only. If the screen is to be fitted on another type of wall such as plasterboard or stud walls, appropriate fixings should be used.

Ensure the location you wish to fit the screen is suitable before installing. Ensure that the floor or installed shower tray is level and the walls are vertical, as the screen will not sit correctly on an uneven surface.

Once installed do not use the screen for 24 hours to allow the silicone to fully dry.

This product is designed to be used with square or rectangular floor areas/shower trays only. The adjustment on this screen is 12mm.

Safety Notes

Please ensure appropriate safety flooring is used in the area as it is normal for spillage to occur from the showering area.

Use safety eyewear and clothing when drilling walls and handling glass. Handle with care, safety glass cannot be re-worked or replaced by ordinary glass.

This product is heavy and requires a 2-person lift.

Keep small parts away from children.

Cleaning

The screen must only be cleaned with warm soapy water and a damp cloth or sponge. Abrasive, caustic or scouring products must not be used as these will damage the surfaces of the screen.

Check the floor is level and walls are vertical with a spirit level.
If using a shower tray, check that it is also level. It must have been fully sealed with silicone sealant at least 24 hours prior to installing the enclosure.

Drill four evenly spaced holes into the wall bracket. These holes will be used for fixing the bracket to the wall. Position the wall bracket onto the shower tray ensuring a distance of 3–4mm from the front edge of the tray or the limit of the floor area for a wetroom installation.

Using a spirit level, ensure the wall bracket is vertical, then mark the drill positions through the four fixing holes drilled previously.

Remove the wall bracket from wall, drill holes in marked position using a 6mm drill bit then fit rawl plugs provided (or appropriate fixings for your wall type).

Note: We recommend suitable eyewear be worn when drilling walls.
Installion

5

Fix the wall bracket in position using the four 34mm screws provided. 
**Do not over tighten.**

6

Slide the straight glass panel into the fixed wall bracket ensuring that the glass is in a satisfactory position.

7

Attach the glass seal on the inside, between the glass and the aluminium frame using the glass seal applicator tool provided. Simply tap the seal into place. 
**Note: with the angled face of the fitting tool against the glass tap the seal into place, then drag the tool down joint feeding the seal into the gap.**
This secures the glass in place.

8

To fit the wetroom screen as a side or end panel, the procedures outlined in steps 1–7 are identical. 
However, a Side Brace Bar (not supplied) is required to secure the top of the panel to the wall. Follow the fitting instructions supplied with the Side Brace Bar to complete the installation.
To fit the brace bar ➊, use a hacksaw to cut to the correct length when the bar is positioned approx 150mm from the edge of the glass panel.  
**Note:** Cut the brace bar on a soft surface to ensure that the chrome doesn’t get damaged.

Sit brace bar ➋ onto the glass ensuring it is level. Mark the wall support position on wall with a pencil, then remove the brace bar from glass. Attach the wall support through the centre to the wall using rawl plug and screw provided.  
**Note:** Ensure that the grub screws on the wall support are facing upwards.

Place plastic glass protector onto glass approx 150mm inwards from the edge of the curved glass. Attach brace bar ➋ and tighten grub screws ensuring they are facing inwards to complete fitting using allen key supplied.

Apply a narrow bead of silicone to the outer edge of the wall brackets. To ensure a full seal and STRONG fixing of the screen, silicone both SIDES of the glass panel to the tray.  
**You must allow 24 hours for silicone to dry before use.**
