5mm Pivot Door

* Side Panel shown for illustration purposes only.
Before you Start

Please read this Installation Guide fully. Although these instructions are comprehensive we always recommend that a technically competent installer undertake the installation, as incorrect fitting will invalidate the guarantee.

Unpack with care and check that the enclosure is the correct colour, size, shape and type you require. Ensure that you have all the parts listed as supplied and check for any damage. Do not install if you are not satisfied and contact your local supplier.

Important

Ensure the location where you wish to fit the enclosure is suitable. Check there are no electrical cables or pipe work behind the wall. Ensure you have a clean dry area to work within before starting.

The fixings provided for this enclosure are for use on solid walls only. If the enclosure is to be fitted on another type of wall such as plasterboard or stud walls, appropriate fixings should be used and additional tools, fixings or materials may be required.

Ensure that the shower tray installed is level and the walls are vertical, as the enclosure will not sit correctly on an uneven surface. The enclosure can also be used in a wetroom subject to the provision of a periphery area that is flat and level.

Once installed do not use the enclosure for 24 hours to allow the silicone to fully dry.

This product is designed to be used with square and rectangular trays only.

The adjustment on this enclosure is 20mm.

This pivot door can also be installed with a side panel. If installing with a side panel please refer to the side panel fitting instructions after stages 2 and 4 of this instruction.

Safety Notes

Please ensure appropriate safety flooring is used as it is normal for spillage to occur when exiting from the shower.

Use safety eyewear and clothing when drilling walls and handling glass. Handle with care, safety glass cannot be re-worked or replaced by ordinary glass.

This product is heavy and requires a 2-person lift.

Keep small parts away from children.

Cleaning

The enclosure must only be cleaned with warm soapy water and a damp cloth or sponge. Abrasive, caustic or scouring products must not be used as these will damage the surfaces of the enclosure.

Using a spirit level, check that the shower tray is level and that walls are vertical. The shower tray must have been fully sealed with silicone sealant at least 24 hours prior to installing enclosure.

Drill four evenly spaced holes into the flange side of each wall bracket. These holes will be used for fixing each bracket to the wall. Position the wall brackets onto the shower tray ensuring a distance of 10mm from the front edge of the tray.

Note: If you are fitting with a side panel ensure one wall bracket is fixed to the far wall as described above.

Using a spirit level, ensure the wall brackets are straight and positioned vertically, then mark the drill positions through the four fixing holes drilled in Step 2.

Note: The flange side of the wall brackets (with the four drilled holes) must be positioned on the inner side of the shower tray.

Remove the wall brackets then drill holes in the marked positions on the wall using a 6mm drill bit. Fit the rawl plugs provided (or appropriate fixings for your wall type). We recommend suitable eyewear be worn when drilling walls.

Note: If you are fitting a side panel see separate side panel instructions at this stage.
Remove all packing door supports, then slot the two wall brackets 6 onto each side of the assembled glass door A, then carefully sit the door onto the shower tray.

The frame ends slot over the wall brackets as shown.

The door is reversible by turning the frame upside down for left or right hand fitting.

With the door frame in position, centered evenly and sitting correctly, use the 2.5mm drill bit 5 to drill three evenly spaced holes through both the wall bracket and the door frame.

Use the six self-tapping 12mm screws 7 to secure the door assembly to the wall brackets.

Use the screw covers 8 then add cover caps to finish.

Fix the wall brackets 5 to the wall using the holes in the flange side of each bracket with the eight 34mm screws 6 provided.

Use the screw covers 8 then add cover caps to finish.

Do not over tighten.

Level the glass door using the hex bolts on the rear of the hinge with the allen key 9 so the gap between the glass and the shower tray is even all the way along, check this using a tape measure.
Unscrew the door handles and position through the hole in the glass door. Fit into place, ensuring that a washer is positioned on each side. Screw the handles together securely.

Clip both the frame caps and into place on top of the wall brackets to complete installation.

Attach the lower water deflector seal to the glass door ensuring the gutter is facing the inside edge of the shower tray. This will assist correct water directional drainage.

Note: You will need to remove one small stop end from the deflector with a stanley knife to attach the gutter elbow to allow water to flow.

Apply a narrow bead of silicone to outer edge of both wall brackets.

Follow around the whole of the bottom of enclosure and 25mm up the join of the wall bracket.

You must allow 24 hours for silicone to dry before use.
