Installation Guide

6mm Hinged Door

* Side Panel shown for illustration purposes only.
Before you Start

**Please read this Installation Guide fully.** Although these instructions are comprehensive we always recommend that a technically competent installer undertake the installation, as incorrect fitting will invalidate the guarantee.

Unpack with care and check that the enclosure is the correct colour, size, shape and type you require. Ensure that you have all the parts listed as supplied and check for any damage. **Do not install if you are not satisfied** and contact your local supplier.

**Important**

Ensure the location where you wish to fit the enclosure is suitable. Check there are no electrical cables or pipe work behind the wall. Ensure you have a clean dry area to work within before starting.

The fixings provided for this enclosure are for use on solid walls only. If the enclosure is to be fitted on another type of wall such as plasterboard or stud walls, appropriate fixings should be used and additional tools, fixings or materials may be required.

Ensure that the shower tray installed is level and the walls are vertical, as the enclosure will not sit correctly on an uneven surface. The enclosure can also be used in a wetroom subject to the provision of a periphery area that is flat and level.

Once installed do not use the enclosure for 24 hours to allow the silicone to fully dry.

This product is designed to be used with square and rectangular trays only.

The adjustment on this enclosure is 20mm.

This hinge door can also be installed with a side panel. If installing with a side panel please refer to to side panel fitting instructions after stages 2 and 4 of this instruction.

**Safety Notes**

Please ensure appropriate safety flooring is used as it is normal for spillage to occur when exiting from the shower.

Use safety eyewear and clothing when drilling walls and handling glass. Handle with care, safety glass cannot be re-worked or replaced by ordinary glass.

This product is heavy and requires a 2-person lift.

Keep small parts away from children.

**Cleaning**

The enclosure must only be cleaned with warm soapy water and a damp cloth or sponge. Abrasive, caustic or scouring products must not be used as these will damage the surfaces of the enclosure.

Parts Supplied

- **D**: Lower Door Seal and Y-shape Drainage Clips (R/H & L/H) (Qty 1)
- **E**: 2.8mm Drill Bit (Qty 1)
- **F**: 12mm Screws (ref F) (Qty 8)
- **G**: 34mm Screws (ref G) (Qty 8)
- **H**: Rawl Plugs (Qty 8)
- **I**: Screw Covers and Caps (Qty 14)
- **J**: Allen Key (Qty 1)
- **K**: Frame Cap L/H & R/H (Qty 2)
- **L**: Magnetic Door Seal (Qty 1)
- **M**: Magnetic Frame Seal (Qty 1)
Installation

Using a spirit level, check that the shower tray is level and that walls are vertical. The shower tray must have been fully sealed with silicone sealant at least 24 hours prior to installing enclosure.

Drill four evenly spaced holes into the flange side of each wall bracket. These holes will be used for fixing each bracket to the wall. Position the wall brackets onto the shower tray ensuring a distance of 10mm from the front edge of the tray.

Note: If you are fitting with a side panel ensure one wall bracket is fixed to the far wall as described above.

Using a spirit level, ensure the wall brackets are straight and positioned vertically, then mark the drill positions through the four fixing holes drilled in Step 2.

Note: The flange side of the wall brackets (with the four drilled holes) must be positioned on the inner side of the shower tray.

Remove the wall brackets then drill holes in the marked positions on the wall using a 6mm drill bit. Fit the rawl plugs provided (or appropriate fixings for your wall type). We recommend suitable eyewear be worn when drilling walls.

Note: If you are fitting a side panel see separate side panel instructions at this stage.
Remove all packing door supports, then slot the two wall brackets ③ onto each side of the assembled glass door ①, then carefully sit the door onto the shower tray. 

**The frame ends slot over the wall brackets as shown.**

The door is reversible by turning the frame upside down for left or right hand fitting.

Fix the wall brackets ⑧ to the wall using the holes in the flange side of each bracket with the eight 34mm screws ⑥ provided.

Use the screw covers ⑩ then add cover caps to finish.

**Do not over tighten.**

With the door frame in position, centered evenly and sitting correctly, use the 2.5mm drill bit ⑤ to drill three evenly spaced holes through both the wall bracket and the door frame.

Use the six self-tapping 12mm screws ⑦ to secure the door assembly to the wall brackets. Use the screw covers ⑩ then add cover caps to finish.

Level the glass door using the hex bolts on the rear of the hinge with the allen key ⑨ so the gap between the glass and the shower tray is even all the way along, check this using a tape measure.
Dis-assemble the door handle C using the allen key supplied and position through the holes in the glass door. Fit into place, re-assembling in reverse order, and secure the handle with the grub screws using the allen key.
Clip both the frame caps K into place on top of the wall brackets to complete installation.

Fit the appropriate Y-shape drainage clip to the end of the lower door seal D depending on left or right hand door opening. The gutter of the seal faces the inside of the enclosure and the Y-shape drainage clip fits the end nearest the hinge of the door. This will assist correct water directional drainage.

*Note*: Remove the stop end from the seal with a stanley knife to attach the Y-shape drainage clip to allow water to flow.

Fit the magnetic door seal L by sliding onto the edge of the door with the magnetic strip angled to the outside of the enclosure.

Clip the magnetic frame seal M into the frame profile so that the two magnetic strips meet and hold together when the door is in the closed position.
Apply a narrow bead of silicone to outer edge of wall brackets on both sides.
Follow around the whole of the bottom of enclosure and 25mm up the join of the wall bracket.

**Note! DO NOT apply silicone to the inside of the enclosure.**
You must allow 24 hours for silicone to dry before use.
