Installation Guide

Wetroom Side Brace Bar
Before you Start

Please read this installation guide fully. Although these instructions are comprehensive we always recommend that a technically competent installer undertake the installation, as incorrect fitting will invalidate the guarantee.

Unpack with care and check that the product is the correct colour, size, shape and type you require. Ensure that you have all the parts listed as supplied. Check for any damage, do not install if you are not satisfied and contact your local supplier.

Check there are no electrical cables or pipe work behind the wall where you wish to install the screen.

Ensure you have a clean dry area to work within before installing.

Important

The fixings provided for this brace bar are for use on solid walls only. If it is to be fitted on another type of wall such as plasterboard or stud walls, appropriate fixings should be used.

Ensure the location you wish to fit the brace bar is suitable before installing and ensure that the screen it is supporting has been installed correctly.

Safety Notes

Use safety eyewear and clothing when drilling walls and handling glass. Handle with care, safety glass cannot be re-worked or replaced by ordinary glass.

Keep small parts away from children.

Cleaning

The brace bar must only be cleaned with warm soapy water and a damp cloth or sponge. Abrasive, caustic or scouring products must not be used as these will damage the outer surfaces.

Ensure that the wetroom screen panel has been installed correctly as directed in the Wetroom Screen installation guide.

Place the brace bar onto the glass and position so that the wall support bracket and glass bracket are equidistant from the corner.

Ensure the bar is level and mark the position of the wall support, then carefully remove from the glass.

Remove the wall support bracket from the arm using a crosshead screwdriver and replace on the marked wall in order to then mark the hole centre for the fixing screw.
Installation

5. Drill a hole using a suitable drill bit and fit the rawl plug provided.

6. Attach the wall support through the centre to the wall using the screw provided.

Note: We recommend suitable safety eyewear to be worn when drilling the wall.

7. Position the wall arm onto the glass with the grub screw on the inside and reassemble to the wall support.

8. Tighten the grub screws on the glass bracket with a flat head screwdriver.

Note: Do not overtighten.
